Earthclim meeting 2011 Bergen

# Applying forcing from Black Carbon in two different latitude bands

## Experimental setup:

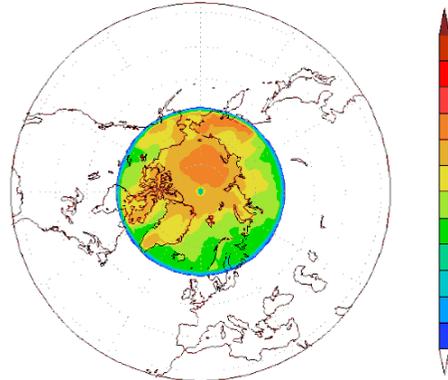

Black carbon concentrations are **multiplied by 10** in 2 different latitude bands;

- **the Arctic** (60N-90N)
- **the mid-latitudes** (28N-60N) .

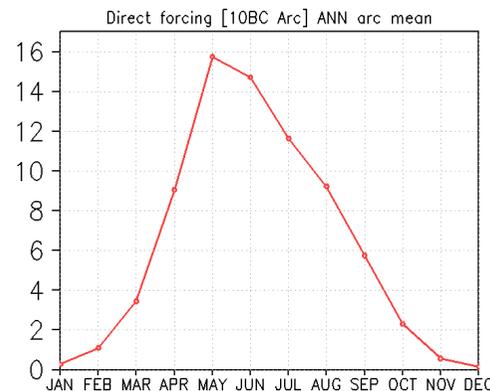

## 10xBC Arctic: 'donut hole forcing'

Direct forcing TOA [ $\text{W/m}^2$ ] -10xBC Arctic-

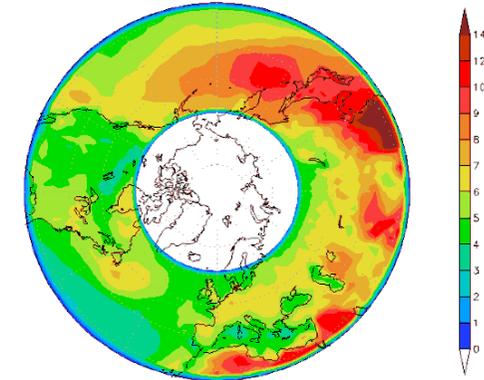

Local mean:  **$6.16 \text{ W m}^{-2}$**   
Global mean:  **$0.41 \text{ W m}^{-2}$**

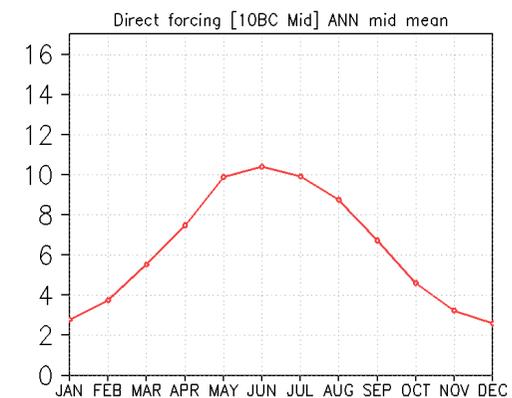

## 10xBC Mid lat: 'donut forcing'

Direct forcing TOA [ $\text{W/m}^2$ ] -10xBC Mid lat-

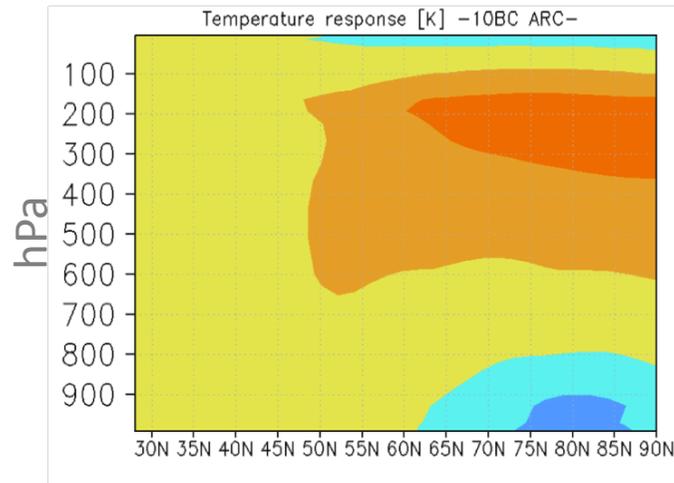

Local mean:  **$6.30 \text{ W m}^{-2}$**   
Global mean:  **$1.26 \text{ W m}^{-2}$**
